

VINCENTIUS NATHANIEL ENGLANA

Jakarta, Indonesia (GMT+7) | nathanielenglana@gmail.com | [linkedin.com/in/nathaniel-englana-5242931b9](https://www.linkedin.com/in/nathaniel-englana-5242931b9)

SUMMARY

Marketer who builds with AI. At Polytron I worked on the campaigns and activations for the launch of the G3, a new electric car, and later planned campaigns with the product team as a freelancer. I use Claude Code to build research, reporting and content workflows, and I check AI output against its sources before anything ships. Looking for digital marketing roles where AI tools are part of the daily work.

EXPERIENCE

Curriculum Marketer & Editor (contract) | SkillWhimsy Sep 2026 to present
Remote (Budapest)

- Write and publish skill courses on an AI tutoring platform through its MCP tools. Built a course cluster on retaining walls and drainage; the first course is live.
- Back every safety-related claim with a fetched source, and report platform bugs and missing features to the founder.

Freelance Marketing and AI Automation | Consumer electronics client Feb 2026 to Jul 2026
Remote

- Kept working with the client after my internship ended, with more responsibility: briefed creative agencies on product knowledge for the campaigns they ran, and planned campaigns with the product manager across several projects.
- Built an AI and Excel workflow for daily social media sentiment analysis that cut manual processing time by more than 80%.

Social Media Specialist Intern | Polytron (EV division) Feb 2025 to Feb 2026
Jakarta, Indonesia

- Worked on the launch campaigns and activations for the Polytron G3, a new electric car, as part of the EV marketing team.
- Handled KOL partnerships, creative agency coordination and account management. My supervisor covered both the two-wheel and four-wheel lines, so I took on more of the day-to-day work, including campaigns for the electric two-wheelers.
- Wrote weekly and monthly performance reports across Instagram, Facebook, TikTok and YouTube, and picked organic posts to put paid budget behind.

PROJECTS

WhatsApp AI booking assistant (2026). A personal business project I founded: an AI assistant that answers WhatsApp enquiries and takes bookings for local businesses.

Source-checked AI research (Oct 2026). Researched AI for construction submittal review in Claude Code, then had a second agent check every quote against its page without seeing the first agent's reasoning.

Content and design system (2026). A Claude Code setup with a custom design system that drafts posts and visuals for personal branding.

EDUCATION

Bachelor of Mass Communication | BINUS University 2026

SKILLS

AI: Claude Code, Claude and OpenAI APIs, MCP, prompt writing, multi-agent research with source checking

Marketing: campaign planning, KOL and agency coordination, social reporting, short-form video, Meta Business Manager

Web and SEO: Framer (AI-assisted), keyword research, Semrush

Data: Excel, SQL, Python (learning)
